Main Display**.

10 ASSIGN - Assign the four rotary controls to various parameters for instant access to commonly-used functions. The LCD displays provide quick reference to the assignments of the active layer of custom controls. Assign each of the eight custom **ASSIGN** buttons (numbered 5-12) to various parameters for instant access to commonly-used functions. Press one of the **SET** buttons to activate one of the three layers of custom-assignable controls. Please refer to the User Manual for more details on this topic.

Press any of the above buttons to switch the input channel bank to any of the four layers listed above. The button will illuminate to show which layer is active.

12 INPUT CHANNELS - The Input Channels section of the console offers eight separate input channel strips. The strips represent four separate layers of input for the console, which can each be accessed by pressing one of the buttons in the **LAYER SELECT** section.

You will find a **SEL** (select) button on top of every channel which is used to direct the control focus of the user's interface, including all channel-related parameters to that channel. There is always exactly one channel selected.

The LED display shows the current audio signal level through that channel.

The **SOLO** button isolates the audio signal for monitoring that channel.

The LCD Scribble Strip (which can be edited via the Main Display) shows the current channel assignment.

The **MUTE** button mutes the audio for that channel.

13 GROUP/BUS CHANNELS - This section offers eight channel strips, assigned to one of the following layers:

- **GROUP DCA 1-8** - Eight DCA (Digitally Controlled Amplifier) groups
- **BUS 1-8** - Mix Bus masters 1-8
- **BUS 9-16** - Mix Bus Masters 9-16
- **MTX 1-6 / MAIN C** - Matrix Outputs 1-6 and the Main Centre (Mono) bus.

The **SEL, SOLO & MUTE** buttons, the LED display, and the LCD scribble strip all behave in the same way as for the **INPUT CHANNELS**.

14 MAIN CHANNEL - This controls the Master Output stereo mix bus.

The **SEL, SOLO & MUTE** buttons, and the LCD scribble strip all behave in the same way as for the **INPUT CHANNELS**.

The **CLR SOLO** button removes any solo functions from any of the other channels.

Please refer to the User Manual for more information on each of these topics.

Please refer to the User Manual for more information on each of these topics.

3. Main Display

1 DISPLAY SCREEN - The controls in this section are used in conjunction with the colour screen in order to navigate and control the graphical elements it contains.

By including dedicated rotary controls that correspond to the adjacent controls on the screen, as well as including cursor buttons, the user can quickly navigate and control all of the colour screen's elements.

The colour screen contains various displays that give visual feedback for the operation of the console, and also allow the user to make various adjustments not provided for by the dedicated hardware controls.

2 MAIN/SOLO METERS - This triple 24-segment meter displays the audio signal level output from the main bus, as well as the main centre or solo bus of the console.

3 SCREEN SELECTION BUTTONS - These eight illuminated buttons allow the user to immediately navigate to any of the eight master screens that address different sections of the console. The sections that can be navigated are:

- HOME** - The HOME screen contains an overview of the selected input or output channel, and offers various adjustments not available through the dedicated top-panel controls.

The HOME screen contains the following separate tabs:

- home:** General signal path for the selected input or output channel.

- config:** Allows selection of the signal source/destination for the channel, configuration of insert point, and other settings.

- gate:** Controls and displays the channel gate effect beyond those offered by the dedicated top-panel controls.

- dyn:** Dynamics - controls and displays the channel dynamics effect (compressor) beyond those offered by the dedicated top-panel controls.

- eq:** Controls and displays the channel EQ effect beyond those offered by the dedicated top-panel controls.

- sends:** Controls and displays for channel sends, such as sends metering and send muting.

- main:** Controls and displays for the selected channel's output.

- METERS** - The meters screen displays different groups of level meters for various signal paths, and is useful for quickly ascertaining if any channels need level adjustment. Since there are no parameters to adjust for the metering displays, none of the metering screens contain any 'bottom of the screen' controls that would normally be adjusted by the six rotary controls.

The METER screen contains the following separate screen tabs, each containing level meters for the relevant signal paths: channel, mix bus, aux/fx, in/out and rta.

- ROUTING** - The ROUTING screen is where all signal patching is done, allowing the user to route internal signal paths to and from the physical input/output connectors located on the console's rear panel.

The ROUTING screen contains the following separate tabs:

- home:** Allows patching of physical inputs to the 32 input channels and aux inputs of the console.

- out 1-16:** Allows patching of internal signal paths to the console's 16 rear panel XLR outputs.

- aux out:** Allows patching of internal signal paths to the console's six rear panel ¼" / RCA auxiliary outputs.

- p16 out:** Allows patching of internal signal paths to the 16 outputs of the console's 16-channel P16 ULTRANET output.

- card out:** Allows patching of internal signal paths to the 32 outputs of the expansion card.

- aes50-a:** Allows patching of internal signal paths to the 48 outputs of the rear panel AES50-A output.

- aes50-b:** Allows patching of internal signal paths to the 48 outputs of the rear panel AES50-B output.

- xlr out:** Allows the user to configure the XLR outs on the rear of the console in blocks of four, from either local inputs, the AES streams, or expansion card.

- **LIBRARY** - The LIBRARY screen allows loading and saving of commonly-used setups for the channel inputs, effects processors, and routing scenarios.

The LIBRARY screen contains the following tabs:

channel: This tab allows the user to load and save commonly used combinations of the channel processing, including dynamics and equalisation.

effects: This tab allows the user to load and save commonly used effects processor presets.

routing: This tab allows the user to load and save commonly used signal routings.

- **EFFECTS** - The EFFECTS screen controls various aspects of the eight effects processors. On this screen the user can select specific types of effects for the eight internal effects processors, configure their input and output paths, monitor their levels, and adjust the various effects parameters.

The EFFECTS screen contains the following separate tabs:

home: The home screen provides a general overview of the virtual effects rack, displaying what effect has been inserted in each of the eight slots, as well as displaying input/output paths for each slot and the I/O signal levels.

fx1-8: These eight duplicate screens display all of the relevant data for the eight separate effects processors, allowing the user to adjust all parameters for the selected effect.

- **SETUP** - The SETUP screen offers controls for global, high-level functions of the console, such as display adjustments, sample rates & synchronisation, user settings, and network configuration.

The SETUP screen contains the following separate tabs:

global: This screen offers adjustments for various global preferences of how the console operates.

config: This screen offers adjustments for sample rates and synchronisation, as well as configuring high-level settings for signal path buses.

remote: This screen offers different controls for setting up the console as a control surface for various DAW recording software on a connected computer. It also configures the MIDI Rx/Tx preferences.

network: This screen offers different controls for attaching the console to a standard Ethernet network. (IP address, Subnet Mask, Gateway.)

scribble strip: This screen offers controls for various customisation of the console's LCD scribble strips.

preamps: Shows the analogue gain for local mic inputs (XLR at the rear) and phantom power, including setup from remote stage boxes (e.g. DL16) connected via AES50.

card: This screen selects the input/output configuration of the installed interface card.

- **MONITOR** - Displays the MONITOR section's functionality on the Main Display.
- **SCENES** - This section is used to save and recall automation scenes in the console, allowing different configurations to be recalled at a later time. Please refer to the User Manual for more details on this topic.
- **MUTE GRP** - The MUTE GRP screen allows for quick assignment and control of the console's six mute groups, and offers two separate functions:
 1. Mutes the active screen during the process of assigning channels to mute groups. This ensures that no channels are accidentally muted during the assignment process during a live performance.
 2. It offers an additional interface for muting/unmuting the groups in addition to the dedicated mute group buttons at the bottom of the console.
- **UTILITY** - The UTILITY screen is a supplemental screen designed to work in conjunction with the other screens that may be in view at any particular moment. The UTILITY screen is never seen by itself, it always exists in the context of another screen, and typically brings up copy, paste and library or customisation functions.

- 3 **ROTARY CONTROLS** - These six rotary controls are used to adjust the various elements located directly above them. Each of the six controls can be pushed inward to activate a button-press function. This function is useful when controlling elements that have a dual on/off status that is best controlled by a button, as opposed to a variable state that is best adjusted by a rotary control.

- 4 **UP/DOWN/LEFT/RIGHT NAVIGATION CONTROLS** - The LEFT and RIGHT controls allow for left-right navigation among the different pages contained within a screen set. A graphical tab display shows which page you are currently on. On some screens there are more parameters present than can be adjusted by the six rotary controls underneath. In these cases, use the UP and DOWN buttons to navigate through any additional layers contained on the screen page. The LEFT and RIGHT buttons are sometimes used to confirm or cancel confirmation pop-ups.

Please refer to the User Manual for more information on each of these topics.

4. Quick Reference Section

Editing Channel Strip LCDs

1. Hold down the select button for the channel you wish to change and press UTILITY.
2. Use the rotary controls below the screen to adjust parameters.
3. There is also a dedicated Scribble Strip tab on the SETUP menu.
4. Select the channel while viewing this screen to edit.

Using Buses

Bus Setup:

The M32R offers ultra flexible busing as each channel's bus sends can be independently Pre- or Post-Fader, (selectable in pairs of buses). Select a channel and press **VIEW** in the **BUS SENDS** section on the channel strip.

Reveal options for Pre/Post/Subgroup by pressing the Down Navigation button by the screen.

To configure a bus globally, press its SEL button and then press **VIEW** on the **CONFIG/PREAMP** section on the channel strip. Use the third rotary control to change configurations. This will affect all channel sends to this bus.

Note: Mix buses can be linked in odd-even adjacent pairs to form stereo mix buses. To link buses together, select one and press the **VIEW** button near the **CONFIG/PREAMP** section of the channel strip. Press the first rotary control to link. When sending to these buses, the odd BUS SEND rotary control will adjust send level and even BUS SEND rotary control will adjust pan/balance.

Matrix Mixes

Matrix mixes can be fed from any mix bus as well as the MAIN LR and Centre/Mono bus.

To send to a Matrix, first press the **SEL** button above the bus you want to send. Use the four rotary controls in the BUS SENDS section of the channel strip. Rotary controls 1-4 will send to Matrix 1-4. Press the 5-8 button to use the first two rotary controls to send to Matrix 5-6. If you press the **VIEW** button, you will get a detailed view of the six Matrix sends for the selected bus.

Access the Matrix mixes using layer four on the output faders. Select a Matrix mix in order to access its channel strip, including dynamics with 6-band parametric EQ and crossover.

For a stereo Matrix, select a Matrix and press the **VIEW** button on the **CONFIG/PREAMP** section of the channel strip. Press the first rotary control near the screen to link, forming a stereo pair.

Note, stereo panning is handled by even BUS SEND rotary controls as described in Using Buses above.

Using DCA Groups

Use DCA Groups to control the volume of multiple channels with a single fader.

1. To assign a channel to a DCA, first be sure you have the **GROUP DCA 1-8** layer selected.
2. Press and hold the select button of the DCA group you wish to edit.
3. Simultaneously press the select buttons of a channel you wish to add or remove.
4. When a channel is assigned, its select button will light up when you press the **SEL** button of its DCA.

Sends on Fader

To use Sends on Faders, press the **Sends on Faders** button located near the middle of the console.

You can now use Sends On Faders in one of two different ways.

1. Using eight input faders: Select a bus on the output fader section on right and the input faders on the left will reflect the mix being sent to the selected bus.
2. Using eight bus faders: Press the select button of an input channel on the input section on the left. Raise the bus fader on the right side of the console to send the channel to that bus.

Mute Groups

1. To assign/remove a channel from a Mute Group, press the **MUTE GRP** screen selection button. You will know you are in edit mode when the **MUTE GRP** button lights and the six Mute Groups appear on the six rotary controls.
2. Now press and hold one of the six Mute Group buttons you wish to use and simultaneously press the **SEL** button of the channel you wish to add to or remove from that Mute Group.
3. When complete, press the **MUTE GRP** button again to reactivate the dedicated Mute Group buttons on the M32R.
4. Your Mute Groups are ready to use.

Assignable Controls

1. The M32R features user-assignable rotary controls and buttons in three layers. To assign them, press the **VIEW** button on the ASSIGN section.
2. Use the Left and Right Navigation button to select a Set or layer of controls. These will correspond to the **SET A, B** and **C** buttons on the console.
3. Use the rotary controls to select the control and choose its function.

Note: The LCD Scribble Strips will change to indicate the controls for which they are set.

Effects Rack

1. Press the **EFFECTS** button near the screen to see an overview of the eight stereo effects processors. Keep in mind that effects slots 1-4 are for Send type effects, and slots 5-8 are for Insert type effects.
2. To edit the effect, use the sixth rotary control to select an effects slot.
3. While a effects slot is selected, use the fifth rotary control to change which effect is in that slot, and confirm by pressing the control. Press the sixth rotary control to edit the parameters for that effect.
4. Over 60 effects include Reverbs, Delay, Chorus, Flanger, Limiter, 31-Band GEQ, and more. Please refer to the User Manual for a full list and functionality.

5. Firmware Updates & USB Stick Recording

To Update Firmware:

1. Download the new console firmware from the M32R product page onto the root level of a USB memory stick.
2. Press and hold the **RECORDER** section's **VIEW** button while switching the console on to enter the update mode.
3. Plug the USB memory stick into the top panel USB connector.
4. The M32R will wait for the USB drive to become ready and then run a fully-automated firmware update.
5. When a USB drive fails to get ready, updating will not be possible and we recommend switching the console off / on again for booting the previous firmware.
6. The update process will take two to three minutes longer than the regular boot sequence.

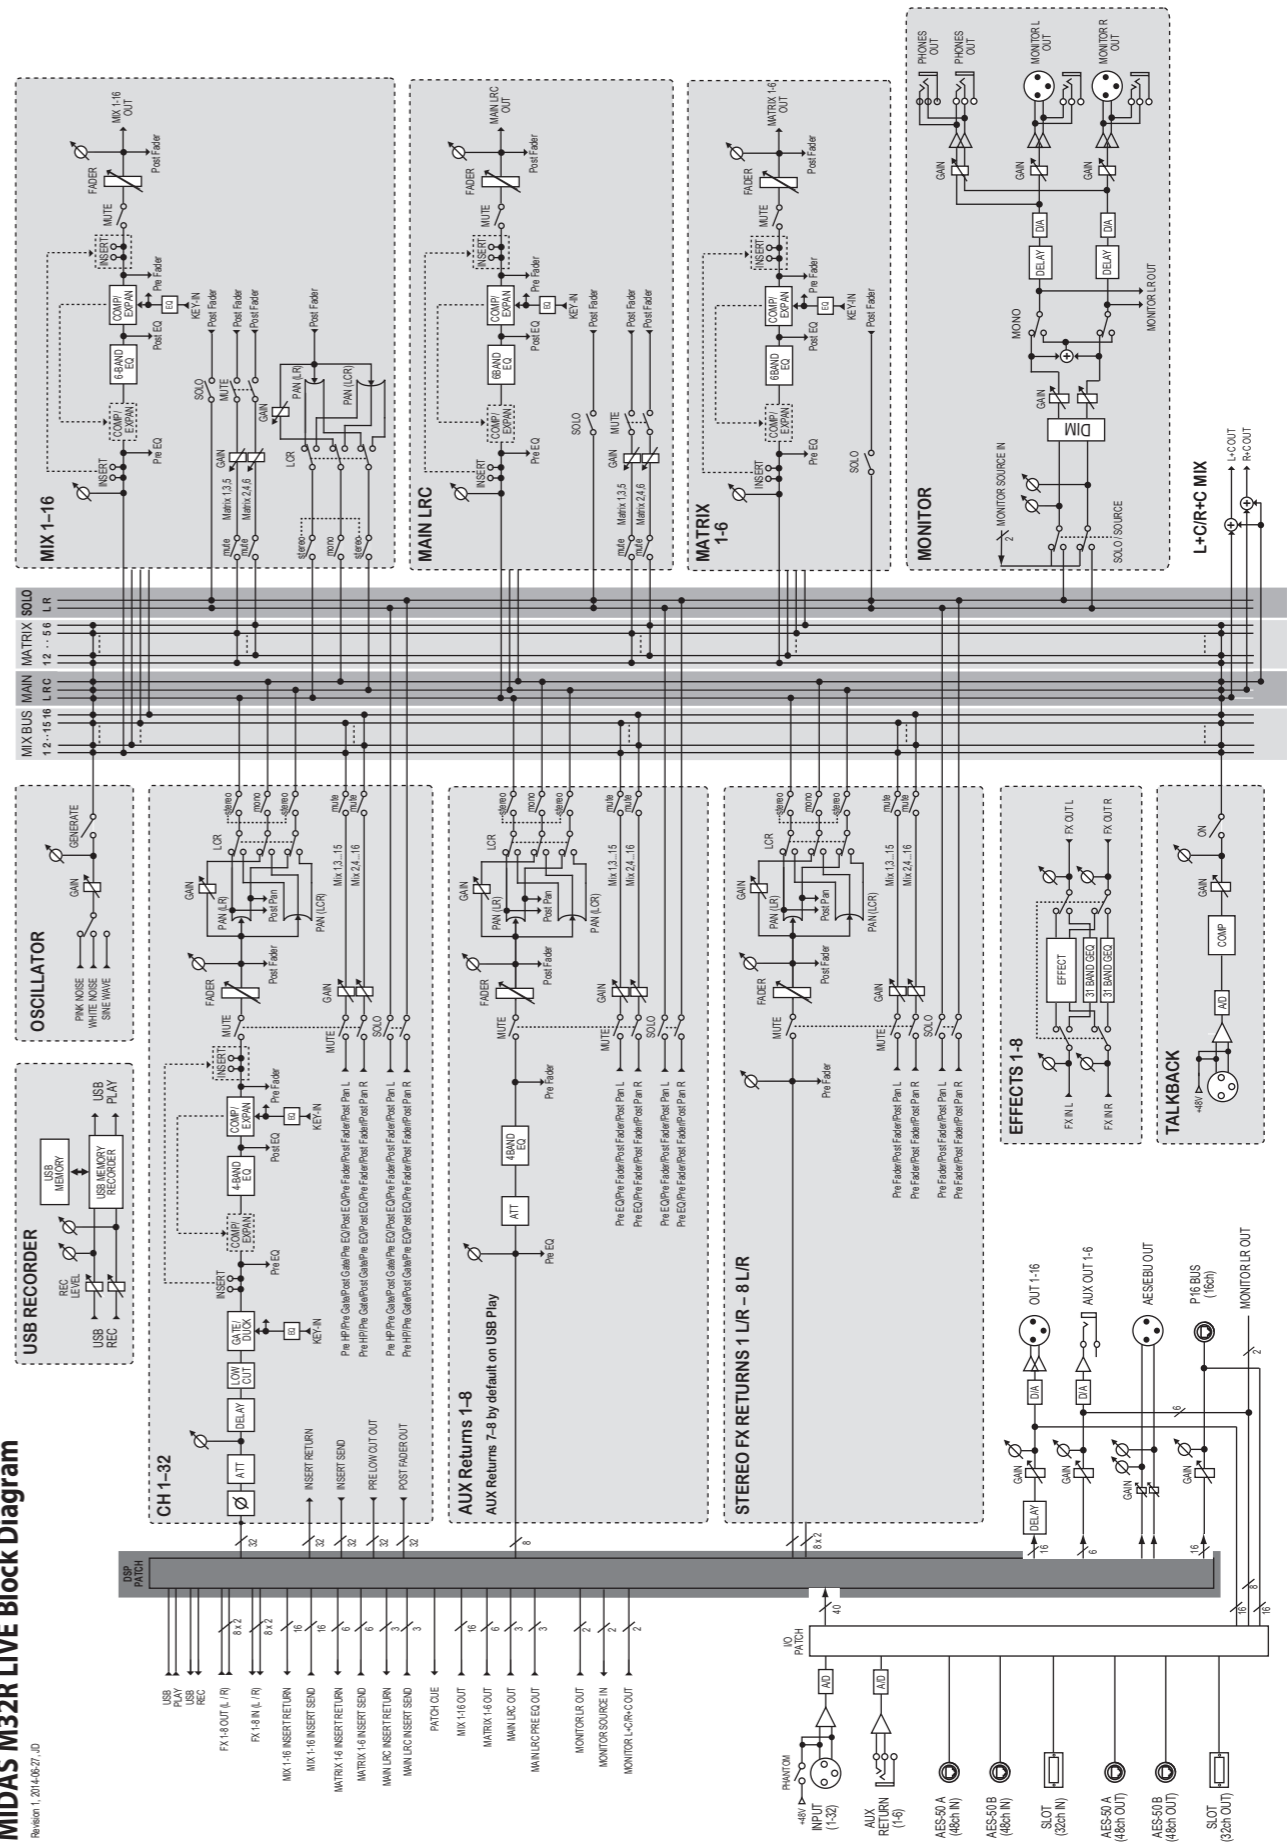

To Record to the USB Stick:

1. Insert the USB Stick into the port on the **RECORDER** section and press the **VIEW** button.
2. Use the second page for configuring the recorder.
3. Press the fifth rotary control under the screen to begin recording.
4. Use the first rotary control to stop. Wait for the **ACCESS** light to turn off before removing the stick.

Notes: Stick must be formatted for FAT file system. Maximum record time is approximately three hours for each file, with a file size limit of 2 GB. Recording is at 16-bit, 44.1 kHz or 48 kHz depending on console sample rate.
